

Electrical Engineer

Requirements: BS degree in Electrical Engineering or Architectural Engineering. 1 to 4 years of experience in delivering design services for the construction of industrial and commercial buildings. Experience with the Pharmaceutical, Biotech, and Healthcare industries a plus.

Responsibilities: Candidate will work closely with in-house senior electrical engineers for facility-level electrical design and drafting of power distribution systems, lighting systems, fire alarm systems, building/motor controls, telecommunication systems and security systems. Precis utilizes 2-D AutoCAD and 3-D Revit drafting software in the design of state of the art and technically challenging projects. Candidate will perform electrical system calculations including load analysis, lighting foot-candle calculations, and short circuit calculations using state of the art computer based programs. The desired candidate will collaborate with in-house mechanical, plumbing, and process engineers as well as architects to accomplish completion of a multitude of project types.

Precis is a 50 person consulting engineering firm located in Ambler, Pennsylvania. We offer excellent salary and benefits. Please visit our website at www.precisengineering.com. Forward your resume to careers@precisengineering.com.
